

## estat mindices — Modification indices

Description Remarks and examples	Menu Stored results	Syntax References	Options Also see
-------------------------------------	------------------------	----------------------	---------------------

## Description

`estat mindices` is for use after `sem` but not `gsem`.

`estat mindices` reports modification indices for path coefficients and covariances that were constrained or omitted in the fitted model. Modification indices are score tests (Lagrange multiplier tests) for the statistical significance of the constrained parameters. See [Sörbom \(1989\)](#) and [Wooldridge \(2010, 421–428\)](#).

## Menu

Statistics > SEM (structural equation modeling) > Testing and CIs > Modification indices

## Syntax

```
estat mindices [ , options ]
```

<i>options</i>	Description
<code>showpclass(<i>pclassname</i>)</code>	restrict output to parameters in specified parameter classes
<code>minchi2(#)</code>	display only tests with modification index (MI) $\geq$ #

`collect` is allowed; see [U] [11.1.10 Prefix commands](#).

<i>pclassname</i>	Description
<code>scoef</code>	structural coefficients
<code>scons</code>	structural intercepts
<code>mcoef</code>	measurement coefficients
<code>mcons</code>	measurement intercepts
<code>serrvar</code>	covariances of structural errors
<code>merrvar</code>	covariances of measurement errors
<code>smerrcov</code>	covariances between structural and measurement errors
<code>meanex</code>	means of exogenous variables
<code>covex</code>	covariances of exogenous variables
<code>all</code>	all the above
<code>none</code>	none of the above

## Options

`showpclass(pclassname)` specifies that results be limited to parameters that belong to the specified parameter classes. The default is `showpclass(all)`.

`minchi2(#)` suppresses listing paths with modification indices (MIs) less than `#`. By default, `estat mindices` lists values significant at the 0.05 level, corresponding to  $\chi^2(1)$  value `minchi2(3.8414588)`. Specify `minchi2(0)` if you wish to see all tests.

## Remarks and examples

[stata.com](https://www.stata.com)

See [\[SEM\] Example 5](#).

## Stored results

`estat mindices` stores the following in `r()`:

### Scalars

`r(N_groups)`                      number of groups

### Matrices

`r(nobs)`                            sample size for each group  
`r(mindices_pclass)`                parameter class of modification indices  
`r(mindices)`                        matrix containing the displayed table values
