Title

> **forecast clear —** Clear current model from memory

Description Menu Syntax [Remarks and examples](Remarks) [Also see](Also)

Description

forecast clear removes the current forecast model from memory.

Menu

Statistics > Time series > Forecasting

Syntax

forecast clear

Remarks and examples

For an overview of the forecast commands, see [TS] **forecast**. This manual entry assumes you have already read that manual entry. forecast allows you to have only one model in memory at a time. You use forecast clear to remove the current model from memory. Forecast models themselves do not consume a significant amount of memory, so there is no need to clear a model from memory unless you intend to create a new one. An alternative to forecast clear is the replace option with forecast create.

Calling forecast clear when no forecast model exists in memory does not result in an error.
